Neopost Introduces Its IJ85 Digital Mailing System For High-Volume Mailrooms

Neopost, the worldwide provider of mailing, addressing, document handling and logistics systems, introduces to the U.S. market its IJ85 digital mailing system designed for the high-volume mailroom where productivity is key. With Neopost's IJ85, customers can take mailroom productivity to a new level for a fraction of the cost of other more expensive mailing equipment that process up to 210 letters per minute.

Modular in design, Neopost's IJ85 offers unlimited flexibility to accommodate changing or future needs. Featuring 2 serial ports that allow for plug-in of additional components, such as a roll tape dispenser and printer, the IJ85 enables customers to broaden their mailroom capabilities.

The IJ85's innovative technology, including the digital inkjet printing system and proven transport system, improves productivity and virtually eliminate errors. Featuring a wide-feed platform and automatic thickness adjustment, the IJ85 can handle oversized envelopes up to 5/8" thick. This eliminates feeding complications and allows operators to flawlessly process even thick, wide or poorly stuffed envelopes. Its advanced features also include an interfaced weighing platform for parcels and large items.

Chris Giles, Neopost Senior Product Marketing Manager, states, "With the introduction of IJ85, Neopost now offers a comprehensive line of products to address the full range of mailing needs for low, mid or high volume mailrooms." The entire Neopost series of USPS-approved, digital mailing systems, including the IJ85, are fully IBI compliant.

The IJ85 is available through Neopost's network of more than 150 branch offices and dealer locations throughout North America. For sales information, call the customer hotline at 1-888-Neopost (636-7678), or visit www.neopostinc.com.

About Neopost

Neopost (Paris Exchange 12056), is the second largest provider of mailing, addressing, document handling and logistics systems worldwide. Neopost allocates an industry leading percentage of its resources to R&D and is the only company that exclusively focuses on mailing, logistics and

document handling products. Neopost's products are sold in 70 countries, with primary operations in the world's top mailing markets including the United States, Canada, France, Germany and the United Kingdom. Visit Neopost at www.neopost.com.

Neopost Inc. is a U.S. subsidiary of Neopost and its corporate offices, customer service, and product development departments are based in San Francisco, California. Local sales and support are available throughout North America.

Neopost's history dates back to the 1920s when the organization's founders introduced the first postage meters in Europe. Over the years, the company has continued to serve as a leader in the design and manufacture of modular mailing, document handling, logistics and e-postage products.

Neopost is the world leader in sales and development of desktop and tabletop folder inserters. Neopost's innovations in the folder inserter market include: the first compact desktop folder inserter; the first tabletop folder inserter that inserts into both flats and business-size envelopes; and high security optical mark reading similar to costly floor models. Neopost's unique Load 'N Go mode, featured in its SI68 and SI76 folder inserters, automatically detects which feeders have paper, then adjusts settings such as fold type, fold length, envelope size, paper length and paper thickness. Load 'N Go virtually eliminates operator adjustments and the need to program every job.
