Neopost Announces Its Parcel Receiving Management System, NeoTrak[®]

Mailroom supervisors and mail center managers “take control” of managing the receipt and delivery of incoming packages and overnight documents

Neopost, the worldwide provider of mailing, addressing, document handling and logistics systems, announces NeoTrak[®], a mailroom and mail center parcel-receiving management software that automates the process of receiving and tracking the internal delivery of medium to large numbers of inbound parcels. NeoTrak is ideally suited for corporations, financial institutions, government agencies and universities.

By tracking the status of each parcel during the internal delivery process, NeoTrak allows managers to improve inbound mail processing while decreasing operational costs, and increasing productivity and overall reliability. The voice activation and barcode scanning technologies offered by NeoTrak eliminate data entry errors and remove the need for manual parcel log-in time. The ability to capture the parcel recipient’s signature electronically serves as proof of delivery and lowers the possibility of lost packages. All information is stored in a permanent database for quick, easy access tracking and reporting purposes.

The Neo-E-Trak[®] option allows employees at their desktop computers: to receive email notification from the mailroom that a parcel has been received; to schedule mail and package pick-ups from their offices; and to alert the mailroom to look out for important packages.

About Neopost

Neopost (Paris Exchange 12056), is the second largest provider of mailing, addressing, document handling and logistics systems worldwide. Neopost allocates an industry leading percentage of its resources to R&D and is the only company that exclusively focuses on mailing, logistics and document handling products. Neopost's products are sold in 70 countries, with primary operations in the world's top mailing markets including the United States, Canada, France, Germany and the United Kingdom. Visit Neopost at www.neopost.com.

Neopost Inc. is a U.S. subsidiary of Neopost and its corporate offices, customer service, and product development departments are based in San Francisco, California. Local sales and support are available throughout North America.

Neopost's history dates back to the 1920s when the organization's founders introduced the first postage meters in Europe. Over the years, the company has continued to serve as a leader in the design and manufacture of modular mailing systems, addressing systems, postage meters, electronic postage scales, and e-postage products.

Neopost's innovations include the first electronic postage meter, the first postage meter and scale system providing automatic meter setting from the scale, and the first compact desktop folder inserter. Other innovations include Neopost's No Deposit Postage-On-Call®, the first remote meter resetting system not requiring prepayments; and the Neopost Price Protection Program®, which guarantees a fixed cost for the life of the contract and provides one monthly or quarterly payment. Neopost's unique Load 'N Go mode, featured in its SI68 and SI76 folder inserters, automatically detects which feeders have paper, then adjusts settings such as fold type, fold length, envelope size, paper length and paper thickness. Load 'N Go virtually eliminates operator adjustments and the need to program every job. Most recently, Neopost introduced the IJ25, the first stand-alone digital postage meter to comply with the United States Postal Service's Information-Based Indicia Program (IBIP) for simultaneous metering and barcode generation.
