Neopost Introduces Enhancement to Mailing Systems

Industry's First Modular Thermal Roll Tape Dispenser

Neopost, the worldwide provider of mailing, addressing, document handling and logistics systems, introduces its thermal roll tape dispenser specifically designed to enhance its IJ65/75 and 85 series of digital inkjet mailing systems. Neopost's series of digital inkjet mailing systems is comprised of the IJ105 for high-speed performance, the IJ75 and IJ85 for high-volume mailings, the IJ35 and IJ45 for small businesses with occasional large-volume mailings, and the IJ25 for the Small Office/Home Office (SOHO) market. The thermal roll tape dispenser is an external modular unit that can be integrated into existing machines as well as newly purchased systems. It offers a sleek design and the capability to broaden mailroom operations.

Neopost's thermal label dispenser connects to the serial port of the IJ65, IJ75 and IJ85 mailing machines. It is fully IBI equipped and meets both current and future USPS postal regulations. Unlike the pre-cut postage meter tapes that must be peeled before being adhered to a parcel, the dispenser provides self-adhesive labels to the exact length, that are ready to stick, no peeling required. This enables a faster flow, and saves on costs associated with using a significant number of labels.

The entire line of Neopost's digital inkjet mailing systems provides greater postage revenue security through a digitally signed barcode in the indicia. The digital signature verifies the integrity of the information in the barcode, which is can be automatically scanned for faster mail processing.

All digital inkjet mailing systems are available through Neopost's network of more than 150 branch offices and dealer locations throughout North America. For sales information, call the customer hotline at 1-888-Neopost (636-7678), or visit www.neopostinc.com.

About Neopost

Neopost (Paris Exchange 12056) is the second largest provider of mailing, addressing, document handling and logistics systems worldwide. Neopost allocates an industry leading percentage of its resources to R&D and is the only company that exclusively focuses on mailing, logistics and document handling products. Neopost's products are sold in 70 countries, with primary operations in the world's top mailing markets including the United States, Canada, France, Germany and the United Kingdom. Visit Neopost at www.neopost.com.

Neopost Inc. is a U.S. subsidiary of Neopost and its corporate offices, customer service, and product development departments are based in San Francisco, California. Local sales and support are available throughout North America.

Neopost's history dates back to the 1920s when the organization's founders introduced the first postage meters in Europe. Over the years, the company has continued to serve as a leader in the design and manufacture of modular mailing, document handling, logistics and e-postage products.

Neopost is the world leader in sales and development of desktop and tabletop folder inserters. Neopost's innovations in the folder inserter market include: the first compact desktop folder inserter; the first tabletop folder inserter that inserts into both flats and business-size envelopes; and high security optical mark reading similar to costly floor models. Neopost's unique Load 'N Go mode, featured in its SI68 and SI76 folder inserters, automatically detects which feeders have paper, then adjusts settings such as fold type, fold length, envelope size, paper length and paper thickness. Load 'N Go virtually eliminates operator adjustments and the need to program every job.

For more information, visit Neopost Inc. at www.neopostinc.com or call 1-888-Neopost (636-7678).
