**Neopost's Tabbing & Labeling Systems  
Increase Productivity on Self-Mailers**

Neopost, a worldwide leading provider of mailing, addressing, document handling and logistics systems, announces the launch of its complete line of Tabbing and Labeling Systems. Each tabbing machine is designed to quickly and automatically seal a variety of self-mailers such as newsletters, catalogs, brochures, flyers, and booklets. All three Neopost tabbing models, the TA40, TA50, and TA60 series, accommodate custom applications and meet USPS self-mailer requirements, qualifying users for significant automation discounts. For added flexibility, the Neopost SL Labeling System places address labels and/or stamps onto the mail piece. The SL operates in-line with the TA50 and TA60 or as a standalone unit.

Neopost tabbing systems feature user-friendly controls, require little or no training and, unlike other systems, perform tabbing and labeling functions in one pass, significantly increasing productivity for mailing applications. Each machine can process nearly double the thickness of other leading brands, has greater hopper capacity, offers single or double tab functionality, and has a price advantage over competitive systems. Tabs are available perforated for easy opening and in a wide range of colors.

## **About Neopost**

Neopost Inc. is a subsidiary of the Neopost Group, the second largest provider of mailing, addressing, document handling and logistics systems worldwide. Neopost's products are sold in 70 countries, with primary operations in the world's top mailing markets including the United States, Canada, France, and the United Kingdom.

Neopost Inc. is headquartered in Hayward, CA, where the North American corporate offices, customer service, and product development departments are located. Local sales and support are available throughout North America.

Neopost's innovations include the first electronic postage meter, the first postage meter and scale system providing automatic meter setting from the scale, and the first compact desktop folder inserter. Other innovations include Neopost's No Deposit Postage-On-Call®, the first remote meter resetting system not requiring prepayments; and the Neopost Price Protection Program®, which guarantees a fixed cost for the life of the contract and provides one monthly or quarterly payment. Neopost's unique Load 'N Go mode, featured in its SI68 and SI72 folder inserters, automatically detects which feeders have paper, then adjusts settings such as fold type, fold length, envelope size, paper length and paper thickness. Load 'N Go virtually eliminates operator adjustments and the need to program every job. Most recently, Neopost introduced the IJ25, the first stand-alone digital postage meter to comply with the United States Postal Service's Information-Based Indicia Program (IBIP) for simultaneous metering and barcode generation.

Neopost's history dates back to the 1920s when the organization's founders introduced the first postage meters in Europe. Over the years, the company has continued to serve as a leader in the design and manufacture of modular mailing systems, addressing systems, postage meters, electronic postage scales, and e-postage products.
