

- Microsoft Windows® based
- Intuitive, easy-to-read menu screens
- Real-time account/department validation
- Interfaces with up to 16 Neopost mail machines in one location
- Monitors meter activity (ascending and descending)

## Neopost Mail ManagerII Data Consolidation System

The MailManager II Data Consolidation System is a unique application software program that provides the ability to collect postage transaction data directly from multiple Neopost postage meters. The MailManager II combined with one or more mailing machines is a complete mail accounting solution designed to help automate and manage the mailroom operation.

The MailManager II software resides on a separate query workstation PC. It collects and validates postage accounting data from up to 16 mail machines simultaneously. This approach allows the operators to work directly from the mail machine console rather than from an external data entry terminal or PC keyboard. The transaction data is then automatically uploaded to the query workstation and is consolidated with information from other mail machines. This streamlined approach is simple, cost effective, and greatly increases the potential for higher reporting accuracy.

The system provides a wide range of reports in easy-to-understand formats. These reports provide information necessary to improve mail center operations and promote uniform decision-making.

For mail centers that want to consolidate data from multiple mail machines, the MailManager II provides an economical

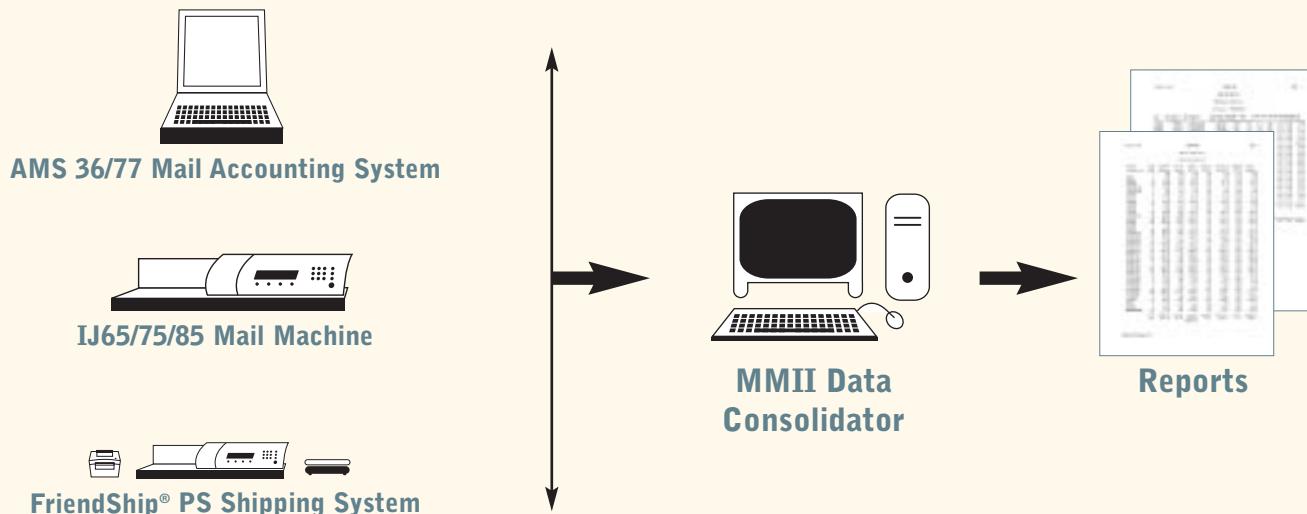

and easy-to-use solution. The Neopost MailManager II Data Consolidation System is available as a turnkey system with a computer or as software only.

### Features

- Allows viewing of multiple mail machine activity while processing mail independently at each workstation
- Exports data to other accounting systems via standard ASCII format
- Captures postage costs, piece count, class-of-service information by validated department
- Unlimited account/department database
- Unlimited number of transactions
- Configuration of handling charges (\$, %, or both)
- Account entry – up to 11-digit alpha/numeric
- On-line help tool
- Supports networking of multiple MailManager II systems
- Can be networked with Neopost FriendShip® systems in multiple locations
- Interfaces to Neopost FriendShip® system and AMS 36/77 terminals

## Neopost's solution gives you one set of data from all of your machines.

### Reports:

- More than 40 standard reports included
- Flexible/customizable reports
